

**FUSE REQUIREMENT FOR
SINGLE ARM ABOVE FLOOR SLIDEOUTS SYSTEMS**

Previously, LCI recommended a 30A fuse for use on all Slideout Systems. In an effort to more closely match the current draw of the Single Arm Above Floor Slideout System, LCI suggests using a 20 amp fuse as protection for this particular electrical system only. All other Slideout Systems should continue using the 30A fuses as our current manuals state.

The above recommendation reflects LCI's preferred installation practices. The final decision for power supply, wire sizing and fuse sizing for all electric slides are left to the Original Equipment Manufacturing Installers.

In the event a 30A fuse blows on Pre-2008 Model Year Single Arm Above Floor Slideout System, it is recommended that it be replaced with a 20A fuse.
