CORRECTIVE ACTION FOR SQUEAKING 2X3 GEAR PACKS

**STEP 1.** Loosen both gear packs bolts (Fig. 1A and Fig. 1B) until tension is off of the gear pack.

**STEP 2.** Using a manual pump oil can, pump 2-3 squints of synthetic motor oil onto gear pack drive shaft in lubrication points (Fig. 2A), (Fig. 3A), (Fig. 4 A through D).

*NOTE:* Do not lubricate rack or pinion gear teeth, lubricate drive shaft only.

*NOTE:* LCI recommends Mobile One Fully Synthetic 10W-30 Motor Oil to lubricate gear pack.

**STEP 3.** Extend and retract slideout arms several times to work lubricant through gear pack.
