

Vehicle-Specific Application Information

Please note: this is NOT a fit chart. This resource document contains information on vehicles that have been seen at the Roadmaster factory. The chart is intended to be a helpful reference for installers and will continue to expand as more vehicles become accessible.

Absence from this resource document simply means the vehicle has not been through our factory.

Every reasonable effort was made to verify the accuracy of this information; however, ROADMASTER, Inc. does not warrant its accuracy and will not be liable for any claims or damages which may result from errors or omissions. Use this information at your own risk.

Information is continually changing and revised as new vehicles and information becomes available. Accordingly, this information is subject to change w/out any notice.

Questions? Comments? Call ROADMASTER Customer Service at 1-800-669-9690.

Vehicle-Specific Application Information Current as of December 21, 2018

Note A: to determine if the towed vehicle and the motorhome have 'separate' or 'combined' brake and turns signals — in a 'separate' system, there are amber or red turn signals which are separate from the brake lights; in a 'combined' system, the brake lights do the flashing for the turn signals.

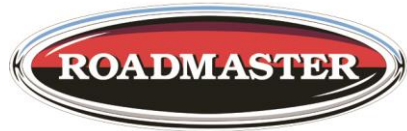

Note B: to determine if a motorhome w/ separate brake and turn signals has a 3-to-2 converter, use a test light to find the turn signal and brake light circuits on the motorhome electrical socket. If the same circuit energizes both the turn signals and the brake lights, a 3-to-2 converter has been installed.

Brake and turn signals — unless the towed vehicle has separate brake and turn signals (see Note 'A' above), the motorhome brake and turn signals must be inspected by the installer to determine which electrical accessories to install. Based on the brake and turn signals in both vehicles, there are three possibilities: 1) If the towed vehicle has combined and the motorhome has combined (see Note 'A' above), then a Brake-Lite Relay (#88400) is recommended. 2) If the towed vehicle has combined and the motorhome has separate w/ a 3-to-2 converter (see Notes 'A' and 'B' above), then a Brake-Lite Relay (#88400) is recommended. 3) If the towed vehicle has combined and the motorhome has separate w/out a 3-to-2 converter (see Notes 'A' and 'B' above), then a Brake-Lite Relay (#88400) and a Brite-Lite Relay (#732) are recommended.

Purpose of the stop light switch — the motorhome monitors on all ROADMASTER supplemental braking systems always indicate when the brake pedal is depressed. This is a safeguard against accidental damage to the towed vehicle's brakes — if the customer positions the supplemental braking system incorrectly, w/ the brake pedal depressed, the monitor will alert him before the towed vehicle's brakes are damaged. In some towed vehicles, a stop light switch must be attached to the brake light switch to accomplish this.

Wiring requirements note table

- Use only InvisiBrake or BrakeMaster. If using Invisibrake, start the brake pressure at 20 psi and adjust up if additional braking force is desired. If using Brakemaster, you will also need Brake Pressure Reducer #900002. Do not install portable braking systems.
- See vehicle specific instructions on the FitMaster.
- Box braking systems won't fit
- Fuse(s) must be pulled
- Battery must be disconnected. Roadmaster recommends using Battery Disconnect pn 766.
- If using a supplemental braking system, the battery will drain.
- Vehicle equipped w/ automatic shut-off mode
- Chevrolet has changed their Dinghy Towing procedure for Spark models with manual transmissions. Please see this TSB for more info: [TSB](#)
- Vehicle's brake pedal will not accommodate supplemental braking systems with a pedal clamp. Only an Invisibrake can be used.
- Vehicle has variable voltage taillights. Must use magnetic tow lights.
- The preferred method for this vehicle is utilizing Fusemaster(s); however, a Remote Battery Disconnect is a viable alternative for this vehicle.
- If your owner's manual says to only pull the #19 ACC radio fuse, use part #76511. If it states to pull the #19 ACC radio fuse and the #20 ACC key lock fuse, use part #76512.
- No Battery Disconnect pn 766 on dual battery or diesel models.
- Some 2014 and newer models of this vehicle may use Mortorq® fasteners. If you are installing a BrakeMaster seat adaptor, and the vehicle has these types of fasteners, you will need a PFMTS2E bit to remove them. It can be ordered through your Snap-On dealer.
- Review owner's manual for specific instructions and processes to undertake before towing.
- Some models of this vehicle may have LED taillights. If this is the case, bulb and socket kit #155 cannot be used.
- Premier trim models** are equipped with LEDs inside the taillight housings. They can use universal wiring kits 154 or 152 without problems. They cannot use bulb and socket kits 155 or 152-LED, as there is not enough room in the housing. **L, LT and LS trim models** are equipped with incandescent, variable voltage bulbs. Bulb and socket kits 155 and 152-LED are the only solution for these models.
- Owner's manuals for 2014 Honda CRVs may incorrectly identify the fuse in the schematic. See TSIB for more information.
- As per GM Technical Service Bulletin 17-NA-348, GM has identified 4-cylinder models of this vehicle as having steering instability issues while towing. If you have a 4-cylinder model of this vehicle, you will need a 76517 instead of a 76511, and will need to leave fuse DLIS #32 intact and pull the ABS module fuse located under the hood. Note: due to manufacturing variances, some 4-cylinder models may label the ABS module fuse as #15 or #16. You will also need to install a
