

JUMP STARTER 22

QUICK START GUIDE

GETTING TO KNOW WEEGO 22

CHARGE UP YOUR WEEGO 22

When you unpack your new Weego Jump Starter 22 for the first time, charge it up to 100% using the Micro USB Charging Cord or Car Charger provided. If using the micro USB cord, make sure you use a USB enabled wall adapter (*like the one that comes with your smartphone or tablet*) with an output of 2.1A or greater to charge as quickly as possible.

POWERING ON/OFF

There's a **Power ON/OFF Button** on the back of your Weego 22. **Make sure you turn OFF your Weego 22 after every use; leaving it on slowly drains the battery.**

It takes 2.5 hrs. to fully charge using a 2.1A USB adapter and 1.5 hours to fully charge using the supplied 3A Car Charger. The indicator lights will flash one by one while the unit is charging. A solid light indicates a completed level of charge.

JUMP STARTING

BEFORE YOU JUMP

- ➔ Read all instructions and safety information prior to using this product. Improper use of this product will void your warranty and may result in product damage, excess heat, toxic fumes, fire, and other unsafe conditions for which Weego is not responsible.
- ➔ Read vehicle owner's manual first: it may have specific cautions and instructions about jumping your engine.
- ➔ This product is for use on **12V Lead-Acid** batteries only! **DO NOT** use this product on any other voltage battery, such as 6V, 24V, etc. **DO NOT** use this product on lithium-ion batteries.
- ➔ Never jump or operate any engine in an enclosed area.
- ➔ Put your vehicle in **PARK** and engage the emergency brake (boats and powersports vehicles should be put in **NEUTRAL**).
- ➔ **TURN OFF ALL ELECTRONICS!** – air conditioner, radio, lights, etc.
- ➔ Remove any devices attached to your Weego 22.
- ➔ Never leave your Weego 22 connected to your engine's battery unless actively jumping.
- ➔ Always disconnect the **Smarty Clamps®** from your Weego 22 when not in use.

Connect Clamps

Power ON

Attach BLACK (-), Then RED (+)

When You Have GREEN Light, Start Your Engine

Once it Starts, Disconnect Clamps from Weego 22

Detach Clamps From Battery

JUMP STARTING YOUR ENGINE

1. Ensure your engine is completely OFF.
2. Securely connect the **Smarty Clamps®** to your Weego 22, then power ON.
3. Place your Weego 22 in a secure location or suspend using the provided hook & lanyard so it won't fall.
4. Attach **BLACK** clamp to your battery's negative (-) terminal, then the **RED** clamp to your battery's positive (+) terminal. Adjust your **Smarty Clamps®** to achieve MAXIMUM contact with the terminals. Poor connections will prevent you from starting your engine! *Clear off any dirt or buildup with a wire brush or a dry towel before connecting your clamps.*
5. Check your **Smarty Clamps®** lights. When you have a **GREEN READY** light, start your engine. *If the engine doesn't start, check your **Smarty Clamps®** lights and wait a minute before trying again.*
6. After a successful start, disconnect the **Smarty Clamps®** from your Weego 22.
7. Detach the **Smarty Clamps®** from the battery.
8. You're now good to go - be sure to run your engine for at least 15 minutes before shutting it off again so it has time to recharge your battery.

If you are having issues getting your engine started, see **Troubleshooting** section in your owner's manual for further details and assistance.

UNDERSTANDING YOUR *Smarty Clamps*®

Your *Smarty Clamps*® have a “smart” box that will help guide you through a jump with both sight and sound. It will let you know when it is safe to jump or if there is an error.

● **READY** **Solid green light, no Sound**

Smarty Clamps® detect that you have a good connection and you are ready to jump.

●● **REVERSE +/-** **Flashing Green & Red Lights + Beeping**

You attached the *Smarty Clamps*® on the wrong terminals. Make sure the **BLACK** clamp is attached to the battery's **NEGATIVE (-)** terminal, and the **RED** clamp is attached to the battery's **POSITIVE (+)** terminal. If not attached properly, Weego 22 will not let you jump your engine.

●● **COOL DOWN** **Flashing Red Light + Beeping** **WAIT FOR ●**

This happens when your Weego is cranked longer than the recommended 3 seconds, or if your engine is trying to pull more power than the Weego 22 is willing to provide. Detach the *Smarty Clamps*® from the battery and give the unit up to 3 minutes to cool down. Then, repeat steps 2-5 under *Jump Starting Your Engine*.

● **SEE REVERSE** **Solid Red Light, No Sound**

This means the vehicle's battery is too weak to even start, OR the system voltage of your vehicle is not compatible with your Weego 22 (**for 12V vehicles ONLY**).

● **SEE REVERSE** **Solid Red Light + Beeping**

There may be an engine size issue. If the engine you're connecting to is larger than what we recommend, it will try to pull more power than your Weego 22 is able to give. If this happens Weego 22 will prevent you from jumping your engine. Please see *Engine Compatibility* in your owner's manual to determine if your engine size falls within the scope of Weego 22.

USB CHARGING

Charge your phone, tablet and other portable devices with your Weego 22 using your own USB charging cord. Your Weego 22 comes equipped with **Detect-o-Matic™** USB Charging. This intelligent charger communicates with your device to detect and deliver the fastest-possible charge. To charge your device, plug your charging cord into your Weego 22 USB port, and connect to your device. Power on your Weego 22 and start charging!

USB Charging Port

LIGHTING

Your Weego 22 comes with a 250 lumen LED flashlight. Power on your Weego 22, then briefly press and release the flashlight button to initiate the following sequences:

- 1st click: Normal
- 2nd click: Strobe
- 3rd click: SOS
- 4th click: OFF

You can also skip directly to the OFF position by holding down the flashlight button.

Flashlight Button

Your Weego 22 will give you **up to 7 hours of flashlight time** and **up to 14 hours of strobe & SOS light** on a full charge.
