Two Handle Tub Shower Diverter 4" and 3-3/8"
Brass or Plastic underbody

IINSTALLATION:

1. SHUT OFF SUPPLY

Shut off hot and cold water supply lines. Clear area of all debris

2. DRILL HOLES

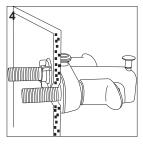

Drill (2) 1" diameter holes spaced at 4" centers, in the tub wall or shower wall surround.

NOTE: The outlet of the tub spout MUST be installed a MINIMUM of 2" above the food rim of the tub.

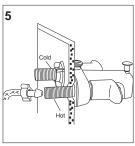

3. Position unit

Spread a small amount of tub and tile calk on the surface of the bottom plate facing the wall. Position faucet through holes of wall.

4. TIGHTEN LOCKNUTS

Align faucet from back side of mounting surface and secure by hand tightening locknuts. THE BOTTOM PLATE MUST BE USED.

5. CONNECT WATER SUPPLY

Hot water to the left and cold water to the right. Make sure that the end of your existing supply line is straight and will touch the chamfer on the inside of the threaded shank. Screw the tailpiece nut onto the faucet shank. Hand tighten.

6. FLUSH LINES

Turn on water supply to faucet. Flush lines by running both cold and hot water through faucet in full open position for 15-20 seconds. Check supply lines for leaks.

7. TROUBLESHOOTING

If the faucet develops a leak, it may be the result of debris in the water line which is preventing a good seal. Turn the faucet full on and off several times to f ush out any material that may be lodged in the faucet. If the problem persists, follow these steps:

- •Turn off the water supply . Open the faucet to relieve any line pressure.
- •Unsnap the Hot or Cold index button on the handle. Remove the handle screw using a phillips screwdriver.
- Lift the handle off. Remove the bonnet lock and washer with a small screw driver.
- •To remove the stem and bonnet, make sure it is in the full on position and, using a 3/4" deep socket turn the bonnet counter clockwise. Remove debris.
- · Replace all components in reverse order.
- · Turn water on and check for leaks.

OPERATING INSTRUCTIONS

KNOB HANDLES:

Rotating the hot side knob handle counter clockwise, and likewise rotating the cold side knob handle counter clockwise, opens the cartridge and causes water tof ow out the center shower outlet. The degree of handle opening determines the volume of watef ow. Returning the lever handles to their original position stops the water f ow.

LEVER HANDLES:

Rotating the hot side lever handle counter clockwise, and likewise rotating the cold side lever handle clockwise, opens the cartridge and causes water to fow out the center shower outlet. The degree of handle opening determines the volume of water fow. Returning the lever handles to their original position stops the water fow.

SHOWER HEAD

Pull up on the spout lift rod knob to divert water f ow from the tub spout to the shower head. To undivert water f ow to the shower head, turn off water f ow at the handles.

CLEANING TIPS

The f nish on your Phoenix faucet is designed to retain its beautiful sheen for years. To maintain the original look of the nish, a little care and caution should be used. We recommend the use of mild soap and water to clean the faucet. THE USE OF ABRASIVE CLEANERS MAY SCRATCH THE FINISH.

HELPFUL HINTS

Be especially careful when screwing threaded connections together . Do not tighten any connection if the parts are not threading evenly Unscrew the parts and start over Unscrew the nut until a click is heard. Then screw the nut on clockwise.

CAUTIONS:

- All plastic connections should be hand tightened. DO NOT USE TOOLS.
- No sealant of any kind should be used between the tailpiece nut and the faucet shank.
- Install with a listed hand held shower head and hose assembly.
- Back f ow prevention is obtained by an "installed" air gap. Install the tub spout outlet
 a minimum of 2" above the f ood rim level of the tub. The air gap acts as a back f ow
 preventer, to prevent contamination of your potable water supply under negative water
 supply pressures.
